

Industrial Intelligence Solutions

Computerized Maintenance Management System (CMMS)

What you might need to help your customers minimize downtime from your assets and deliver a great customer experience

INTECH CMMS is part of our next-gen maintenance promise to get your facilities & services ready for the competitive environment of the digital age. From the ease of one centralized platform, you will enjoy the most simplified work-order management experience through the most user-friendly work-order system that makes day-to-day tasks & job assignment easier while bringing matchless visibility &

control over work progress. INTECH CMMS features Asset Digital Twins which enable you to monitor Asset Health like never before. Instead of reacting to maintenance situations, INTECH CMMS's advanced modules & powerful functionality will empower you to redefine uptime by making proactive maintenance decisions.

INTECH's CMMS

A simplified work-order management experience

What you might need

Effective asset modeling and visibility

Rich Work Order operations

Flexibility to suit your maintenance approach

Repeatability for consistent operations

How CMMS delivers

One of the richest Digital Twins in the world, giving the ability to model Assets, Customers, Locations, Teams, Tools, and Spares

A comprehensive work order form allows you to capture an extensive list of properties, track labor costs, reserve tools and spares, and collaborate across your organization

If the CMMS application is missing a property that is important for you, you can still capture it using our Custom Properties feature

CMMS gives you the power to design templates for your maintenance best practices, for example - Task Groups allow you to ensure each work order for a pump replacement contains the same tasks or steps as it is created

Track maintenance costs

CMMS tracks the cost of both spares and labor associated with each work order. Our Inventory module allows you to assign a cost to each spare as well as a cost / hour for each resource used, for example, labor cost per hour

Effective planning and resource scheduling

CMMS allows you to schedule work orders and resources (personnel, vehicles, tools, spares) in advance, giving your planner and dispatches the ability to assign and prioritize work as per the most urgent needs of the organization

Service team competency management

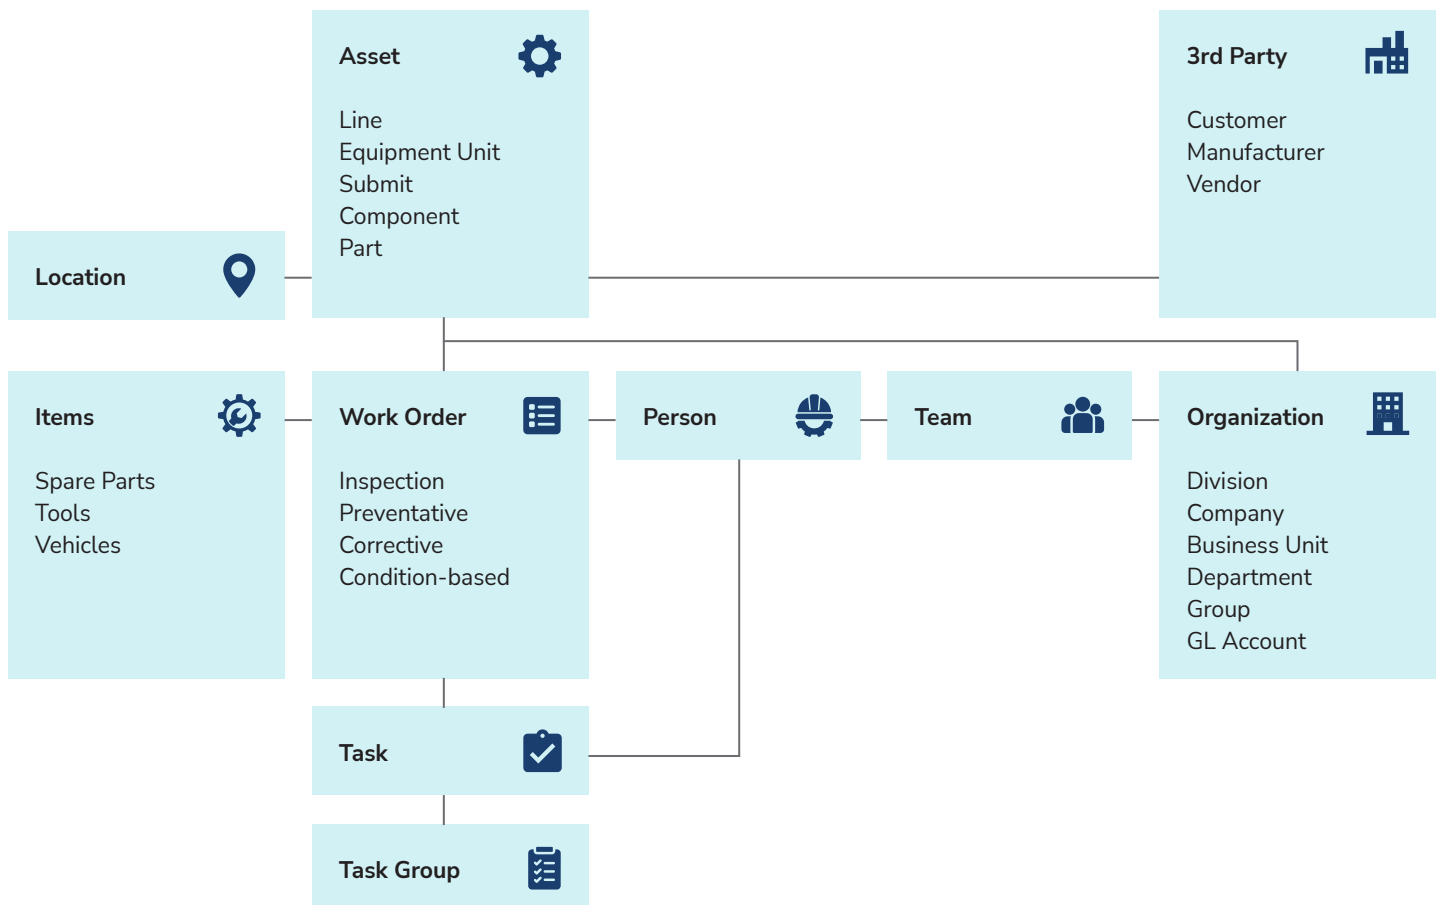

CMMS allows maintenance organizations to track the Skills and Qualifications of their individual field personnel. This helps ensure that your organization has the proper competency to provide reliable service, and that qualified personnel are assigned to relevant maintenance activities

Real-time performance analytics

CMMS comes packaged with a pre-built set of analytical dashboards covering crucial KPIs such as total and open work orders, average cycle time, estimated hours, and total maintenance cost, amongst others

Our Digital Twin

About INTECH Process Automation

For 30 years, INTECH has been helping industrial businesses enhance process visibility, control, and reliability in their industrial plants and assets. Now, in a rapidly evolving digital world, we are here to partner with you in bringing out the best your facilities have to offer through full enterprise visibility and AI-based insights and analytics.
